

CCA-K-351P

- industrial pressure transmitter
- hygienic version
- nominal pressure: from 0...40mbar up to 0...20bar
- output signals: 2-wire: 4...20 mA; 3-wire: 0...10V
- ceramic sensor
- accuracy 0.35 % span
- different process connections (G1 1/2", diary pipe, clamp, etc.)
- high overpressure capability
- optionally: diaphragm 99.9% Al₂O₃, customer specific versions

The pressure transmitter **CCA-K-351P** has been designed for measuring small system pressure in the food industry and chemical industry. The CCA-K-351P is based on an own-developed capacitive ceramic sensor element. It features high overpressure resistance and high resistance against most of aggressive media. A variety of different process and electrical connections and an intrinsically safe version complete the range of possibilities.

PREFERRED AREAS OF USE ARE

Food Industry

Paint and Varnish

Chemical and Petrochemical Industry

Viscous and Pasty Media

1 - absolute pressure from 0.04 bar up to 0.25 bar on request
 2 - code TR0 = PVC cable, cable with ventilation tube available in different types and lengths; cable not included in the price
 3 - the cup nut has to be mounted by production of pressure transmitter with electrical connection field housing and mechanical connection dairy pipe. The cup nut has to be ordered as separate position.

Manufacturer reserves the right to change sensor specifications without further notice.
